Which insect are you? The entomology for everyone – Book review

Thank you for coming to present the review of the above mentioned book at the eThekweni Biodiversity Forum meeting on November 2016. The book contribute immensely in raising awareness and educating people about insects and their importance in provision of ecosystem goods and services.

The book is the first of its kind that is able to catch the child and adults' mind while communicating difference insect species, their importance in the entire ecosystem and food web. More so when the book tells a story of insects written in a friendly – reader catching style.

The author has succeeded in making science interesting for the readers of all ages and I would recommend that this book be included in some curricula for kids at an early age in order to inspire interest in an already scarce-skilled biodiversity field.

Kind regards

Bheki Mdletshe: Senior Environmental Technician
